

## The Problem We Solve

### Compliance is manual and disorganized

The Aesir Platform compiles all your data sources and applies them to any compliance framework — Risk Management Framework (via STIGs), FedRAMP, CMMC, and custom industry-specific security policies and standards.

### Security tools operate in silos

The Aesir Platform integrates all SDLC security functions, leveraging the tools you've deployed and filling gaps in the security tapestry. Bring your data together to be continuously aware and compliant.

## Compliance & Security Consulting

Let our experts guide you through the most demanding compliance frameworks, so you can focus on your mission.

### FedRAMP 20x Preparation

Digital records, automation evidence, and streamlined authorization packages.

### CMMC Certification

Assessment, validation, and remediation support across all maturity levels.

### Security Guidance Authorship

Partner with us to produce STIG-ready formal hardening guides for your software. Use them to enable downstream automation.

### ATO Acceleration

Optimize and automate the path to an initial Authorization to Operate (ATO). Then stabilize it to achieve Continuous ATO (cATO).

## Why Aesir Systems

*Aesir Systems's expert engineers have years of development, testing, implementation, assessment, and remediation experience for software systems. We built the Aesir Platform to solve the challenges we saw every day.*

-  **Framework architects:** We wrote the compliance frameworks government and industry use to measure and prove cybersecurity.
-  **Ahead of the curve:** Aesir has the process and platform for putting all the cybersecurity pieces together to rapidly achieve ATO.
-  **We know the players and coaches:** Defense Industrial Base, civilian government, and enterprise.
-  **We've delivered:** Compliance frameworks, systems, applications, dashboards, APIs, trainings, and white papers.
-  **Security unified:** Cybersecurity is best done using many tools in concert. Aesir builds modular, easy-to-integrate systems to fill in your tooling gaps.

## The Aesir Platform

One DevSecOps platform suite covering every phase of cybersecurity.

### PLAN

#### **Aesir Sindre™** Documentation Application

Author security guidance based on government and industry benchmarks. Define security for your system.

### HARDEN & VALIDATE

#### **Aesir Automation Content™** Library

Validate any system against your hardening guidance, continuously and anywhere. Identify and remediate misconfigurations.

### STANDARDIZE

#### **Aesir Bifrost™** API

Translate any scanner output into the standardized Heimdall Data Format for easy aggregation and analysis. Map across and between federal and commercial standards.

### VISUALIZE

#### **Aesir Vara™** Dashboard

See your entire security posture. Drill into security data, track compliance over time, and prioritize remediation.

### Aesir Mimir™ AI Engine

Security-aware AI trained on the complete compliance corpus. Cites sources, never guesses.

### Aesir Wellspring™ AI Hardware

Rack-mount AI appliance for air-gapped and disconnected environments. Data never leaves your network.

DEPLOY:  SaaS  On-Prem  Air-Gapped
